

This is Medicines Optimisation

Pharmacist led medicines reconciliation reduces errors on the medicines list from 3.96 to 0

Medicines Administration

The pharmacy team can reduce medicine administration error rates from 8.3% to 1.3% and significantly reduce nurse administration round time

Right patient
Right medicine
Right time
Right dose
Right route

On average 5.5 interventions will be made by the pharmacy team per patient

This can reduce medicine errors, unwanted effects and medicines interactions

The pharmacy team can reduce errors on the discharge medicine list to less than

1%

The pharmacy team can

- Reduce length of hospital stay by 2 days
- Reduce 30 day readmission rate by 9.9%
- Improve patient safety
- Achieve better patient outcomes

When a pharmacist intervenes a cost of up to £825 per patient can be avoided
